DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP0790560.

As per claims 1-13, EP0790560 obviously teaches an interface circuit capable of allowing transmission of data from a detachable card-type memory (IC card, 12b), which requires access by sectors, to an electronic device, comprising:

a reading unit (11b, card interface part of reading unit/peripheral device, 10 Fig. 2) that reads data for a plurality of sectors (buffer fields) from the card-type memory; a buffer (prefetch buffers 35-38, that receives the input data from the card, and provides the input data to the computer) in the reading unit that stores the data read and has a capacity to store data for a plurality of sectors (buffer fields); a receiver that receives from the electronic device a read-access (control command) for data stored in the buffer; a data checker (pg. 4, lines 46-pg. 5, lines 1-55) that decides whether data corresponding to the read-access exists among the data stored in the buffer; and a transmitter that transmits the data from the buffer to the electronic device when the data checker decides that data corresponding to the read-access exists among the data

Art Unit: 2182

stored in the buffer. (Abstract, pgs. 2-10) It would have been obvious to one of ordinary skill at the time the invention was made that the IC card utilized by EP0790560 incorporates memory sectors in the form of different buffer fields and the transmission from the IC card to the IC card interface that is connected to peripheral device 10 implements program logic to transfer the data stored on the IC card to the peripheral device's memory.
